Profile

Frontend Software Engineer with experience building scalable, responsive, and high-performance web applications using **React, Vue.js, Next.js, Nuxt.js, TypeScript, and Tailwind CSS**. Skilled in creating reusable component architectures, optimizing application performance, integrating REST APIs, and delivering modern user experiences. Familiar with backend technologies such as **Node.js**, enabling effective collaboration across the full development lifecycle. Passionate about writing clean, maintainable code and building user-centric applications.

Professional Experience

Frontend Developer, Directsaz 	01/2025 – 05/2026
Directsaz (AI-Powered Instagram Assistant)	Rasht, Guilan, Iran
- Developed and maintained both the React web application and the company's public-facing website. - Built and maintained responsive, reusable, and scalable UI components using React, JavaScript, Redux and modern frontend technologies like AntDesign. - Integrated REST APIs for AI-powered comment generation, transcription, wallet management, affiliate marketing, and CRM workflows. - Implemented complex state management, form validation, and real-time UI updates to enhance user experience. - Optimized frontend performance through lazy loading, code splitting, memoization, and efficient rendering techniques. - Collaborated closely with backend, AI, and design teams to deliver scalable, production-ready features and ensure a consistent user experience across the platform.	
Frontend Developer, Timeha website 	01/2026 – 03/2026
Facial Online Booking Platform	Rasht, Guilan, Iran
- Developed a modern facial service booking platform using Next.js, React, TypeScript, HeroUI, and Tailwind CSS. - Built responsive and SEO-friendly user interfaces leveraging Server-Side Rendering (SSR) for improved performance and search engine visibility. - Developed reusable and maintainable UI components following a scalable component-based architecture. - Implemented online appointment booking workflows, specialist listings, service details, and scheduling interfaces. - Integrated REST APIs for real-time availability, booking management, and user interactions. - Optimized application performance through code splitting, image optimization, lazy loading, and efficient rendering techniques. - Collaborated with designers and backend developers to deliver a fast, accessible, and production-ready user experience across desktop and mobile devices.	

Streaming Platform

- Maintained and enhanced **React Native** mobile applications and the **Next.js** web platform for a high-traffic streaming service serving **150,000+ users**.
- Monitored, diagnosed, and resolved production issues to ensure application stability, reliability, and a seamless user experience across web and mobile.
- Implemented bug fixes, performance improvements, and UI enhancements while collaborating with backend and product teams to deliver ongoing platform updates.
- Integrated and maintained REST API connections, ensuring consistent data synchronization and smooth application performance under high traffic.

Gold Trading Platform (Mock Project) [↗](#)

- Developed a modern **Vue.js**-based web application for online gold and silver trading using **Vue 3**, **TypeScript**, and **Tailwind CSS**.
- Built a responsive and component-driven interface for buying and selling precious metals, portfolio management, and real-time market tracking.
- Implemented live gold price visualization, interactive charts, transaction history, and digital wallet management.
- Designed reusable Vue components and optimized application performance using the **Vue Composition API**, efficient state management, and modern frontend best practices.
- Focused on creating a clean, intuitive, and mobile-friendly user experience while following scalable frontend architecture.

Education

B.Sc. in Electronics Engineering, *University of Guilan*

Rasht, Guilan, Iran

currently pursuing an **M.Sc. in Telecommunications Engineering** at the **University of Guilan**.

Developed a strong foundation in engineering principles, problem-solving, and analytical thinking while expanding expertise in modern software development and frontend technologies.

Skills

Languages

JavaScript, TypeScript, PHP

Frameworks

React, Vue, NextJs, NuxtJs, ExpressJs

Database

MySQL, PostgreSQL, Redis, MongoDB

Infrastructure & DevOps

Docker, Linux, Coolify
